

Energy Saving Target

1. Background

With the development of globalization and industrialization, people put much more attention on the environment. In order to follow green manufacturing and low-carbon life, our company will take corresponding measures to reduce energy use and greenhouse gas emissions to achieve sustainable development.

2. Emission Reduction Target

2.1 From November of 2022 to October of 2023, the average power use per month is 3278kwh. The target for 2024 per month power consumption is to decrease 10%.

2.2 From November of 2022 to October of 2023, the average water use per month is 246.2T. The target for 2024 per month water consumption is to decrease 30%.

2.3 Aiming to reduce the energy use, Carbon Emission is planned to reduce 10%.

3. Measurements

3.1 To enhance the publicity and education of energy saving, so that the concept of energy saving is deeply rooted in staff mind to form the habit of saving.

3.2 Monitoring and recording water and electricity consumption every month. To adjust the energy use flexibly.

3.3 To propose energy saving and post slogans including "Save electricity" and "Save water" in office.

3.4 To use LED light to save energy and to implement outdoor daylight as much as possible.

3.5 Promote to save paper, printing paper double-sided, and encourage staff to use recycled paper.

3.6 Regularly check and maintain all electricity equipments.

3.7 All relevant electrical equipment should be turned off after work.
